CONNECTIVITY SOLUTIONS FOR BRAZIL

Deploy IoT applications in Brazil on both local SIM and eSIM.

One of the biggest challenges for IoT solutions in Brazil is the ability to roam permanently. Brazilian law does not allow non-Brazilian IMSIs' to roam beyond 90 days, making IoT deployment in the market challenging and expensive.

Tailored specifically to the Brazilian market, our network solution complies with all the official restrictions and taxation regulations for providers by using Velos IoT's special local profile network setup. We offer two ways to connect in Brazil, depending on your needs:

CONNECT BRAZIL

Choose this route for devices that are not expected to leave Brazil or do not support eUICC. Reduce complexity and prices with a single SIM.

- Local Brazilian MSISDN
- Local prices
- Full regulatory compliancy
- No 90-day roaming limiation

Plug SIM   Access local network   Control your bill

ESIM CONNECT BRAZIL

Choose this route if you intend to ship devices globally. Enabling eSIM would allow you to choose different profiles for different devices depending on where they end up.

- Local Brazilian MSISDN
- eSIM Brazilian MNO profile
- Access to other eSIM profiles
- On-demand over-the-air network change
- Access to a fallback global roaming footprint outside of Brazil

Select MNO   Download Profile   Access Brazil

velos

Connect Brazil is a complete IoT package for the Brazilian market and includes everything you need to deploy. Our solutions is routed through a local breakout in Brazil to reduce latency on dynamic IPs.

Operative SIM and eSIM
- Fall-back roaming profile with 600+ networks for eSIM
- Local Brazilian eSIM profile or local Brazilian SIM
- Over-the-air network profile change
- Access to other eSIM profiles

Dedicated platform
- Centrallised eSIM and SIM status monitoring and management
- Centrallised billing for all global SIM estates
- Automation and re-seller tools
- Data usage control tools

Intelligent design
- GSMA SGP.02.v3.2 certification
- Local profile up to Brazilian official regulations
- Flexible commercial approach and price zoning
- Fixed public and private IPs
- SMS-enabled

Easy integration
- Device verification testing before onboarding
- API integration availability
- Dedicated 24/7 support team

Harness the power of connectivity with Velos IoT. We are a global integrated connectivity provider with extensive experience in delivering IoT services via proprietary core and roaming agreements. Supported by team of 120+ experts and with over 600 global networks, Velos IoT provides customers with sustainable, scalable, compliant, and secure access to connectivity.
